Federal survey items: what a report can forecast

Prepared by Nate Grotberg, 2026-11-10. Every forecast is a model-generated prediction, not a measurement.

The 216 items below come from five federal surveys: National Health Interview Survey (NHIS); Behavioral Risk Factor Surveillance System (BRFSS); Survey of Household Economics and Decisionmaking (SHED); Current Population Survey Annual Social and Economic Supplement (CPS ASEC); Current Population Survey Computer and Internet Use Supplement (CPS CIU). A report forecasts up to three of them for the source's next wave, before the agency publishes it.

- **Who:** all US adults 18 and over, and 21 national groups: age (18-29, 30-39, 40-49, 50-59, 60-69, 70+), sex, race and ethnicity (4 groups), education (5 levels; BRFSS 4) and Census region (4).
- **Where:** every state plus DC wherever the source's file carries state (BRFSS, SHED, CPS ASEC, CPS CIU; BRFSS does not hold every state every year). NHIS covers the nation, its regions and the groups, never states.
- **What you get:** each figure with nominal 80% and 95% model intervals beside the last measured share, a PDF report and the CSVs, sealed with a dated digest before the agency publishes, and scored in public when it does.
- **Terms:** $5,000 for up to three items, 50% on signature, delivered 10 business days from the cleared deposit, one revision included.

> **On points, the forecast sits level with repeating the last wave, and a large state's figure sits close to its last measured share. What a report adds is every state and group carried to the next wave in one table, model intervals, the lead time and a public, dated commitment.**

Interval evidence: coverage has been checked on national and demographic cuts. The cited CPS ASEC 2026 (91%) and BRFSS 2025 (83%) 80% coverage runs contain no state cells. State intervals are nominal. In a held-out test of 18 questions per source across every state each wave carries, BRFSS 2025 state 80% intervals held 90% of state shares (95%: 96%) and CPS ASEC 2026 held 73% (95%: 88%). CPS ASEC state intervals run narrow. SHED and CPS CIU state coverage has not been established.

Use in public with the label "model-generated prediction, not a measurement" and the citation line on every use. Never describe a forecast as a poll or survey result, and never use it in paid political ads or candidate campaign material. No individual-level scores, lists of people or voter-file matching. A question no federal wave asked gets no forecast.
